

WORLD HAPPENINGS BRIEFLY TOLD

Saskatoon city council refused to agree to a request from the British Columbia Japanese who wish to make their home there.

Notwithstanding in Canada have been granted an increase in pay. It was announced at Juliana barracks, Stratford, Ont.

Directors of the Edmonton Exhibition Association decided that a fair would be held in 1943.

For use of grounds can be obtained from the R.C.A.P.

Christmas waders, awarded a disability pension in Britain after the last war, voluntarily relinquished it while the present war had not joined the R.A.F. as an aircraftman.

Personal telephone calls to points outside the western hemisphere, except Britain, have been prohibited by the United States board of war communications.

On the recommendation of the Australian government, the King has agreed to the resignation of Lord Gowrie, governor-general of Australia. His term was scheduled to end Jan. 22, 1943.

The British ministry of information announced officially that the prime minister does not intend to make a further statement reviewing the war before the summer adjournment of parliament.

Prime Minister J. C. Smuts of South Africa has been awarded the Albert Medal of the Royal Empire Society for 1942. The medal was inscribed: "For services rendered in the field, philosopher."

Could Be Depended On

Russians Would Help On Front Line It Needed

Anyone who calls women the weaker sex hasn't been to the front. It's the cradle or wedding a pick-up or the same to the distant half of the Soviet Union.

British Union Press Correspondent M. B. Handler took a trip down the front for river and across the front. And behind the front he saw Russian women doing everything men do and never letting the men get ahead of them.

The hand that takes the Russian cradle also takes time to run a locomotive or to operate a machine, or to serve as ship's officer, deck hands or stewards. Correspondent Handler says he has seen Russian women labor for six hours straight and carrying loads of packing cases with only brief rest periods. Handler says that women

"Should the day arrive when as Russian women would not shortage of women labor would not shortage of moving into the battle as fighting units."

Trim Worktime Style

4108

By ANNE ADAMS

Here it is—the perfect war work or home work "uniform"—Pattern 4108 by Anne Adams. Simple, clean, with a quick front belting; darts to fit the front waist, a slim pattern, back and collar or collar.

Pattern 4108 is available in women's sizes 34, 36, 38, 40, 42, 44, 46, 48, 50. It is made of rayon, cotton, or silk.

Send twenty cents (50¢ in color fabric) cannot be accepted for this Anne Adams pattern.

Name, Address and City: _____

Send to: Anne Adams Pattern Dept., 1739 McClellan St., E. Winnipeg, Man.

CARRIAGE BUSINESS BOOMING

The carriage business in Toronto, according to Louis Bacio, who will be already has sent 30 requests and six luggages back to service and has orders for 60 more remaining jobs on high-wheeled, steel-tired delivery carts.

Thirty million wheels of talon wheels were produced in Brazil last year.

Helping To Win War

Holland's Ships Man War Navy All Risks

New Yorks relaxing at tangle on that River course offers pause to rest the river traffic.

What the racing players see is a great grey merchant ship steaming on or out, then another, and another—another—sombre, arid.

The only spot of color is on the side of the flag on the water.

And there is one spot of color that remains the same and again: The flag of white and blue and red of the Netherlands, in the world's sea it is flown over 3,000,000 tons of merchant ships.

It's the flag of Netherlands, and it's the flag of Holland, it's the flag of the world.

In the possible catastrophe of Norway, when shipping losses have been heavy, Holland more than any other of the countries whose governments have taken refuge in London is to have a fleet of ships to transport troops, oil, food, raw materials, etc.

In doing it, the aluminum Dutch has spared neither the wishes nor privileges of seamen and enterprise. Ship and crew are under government service for the duration and the crew are paid for the duration.

What is not so recognized, there is no profit. There are only the cost of the country's war effort, a risk, a war to be won, a kingdom to be retained.

In a way, says Peter A. Kerkens, Netherlands Minister of Commerce, the Dutch is a government official business in the United States, "our seamen are soldiers."

In effect, they are, for when a Dutch civilian sailor can no more save the service of their ship than the service of their country, they are the army and wants to go back to the front.

But the Ministry of Shipping is a little troubled by attempts at desertion, as it is troubled by attempts to desert, as it is troubled by attempts to desert, as it is troubled by attempts to desert.

When the Netherlands merchant fleet to Britain, the Dutch East India merchant fleet is operating for the benefit of both Britain and the United States.

Help Steel Industry

Development Of Sponge Iron Being Tried In United States

A strange wartime substitute for the making—a substitute for scrap iron and steel. It is called sponge iron, and it is being tried in the U.S. Bureau of Mines has decided to run \$500,000 in a program to develop this industrial process by which it is made.

To make sponge iron, ore is not melted. It is heated with pulverized coal, then fed to a large rotary kiln. When the kiln is heated to 1,800 degrees F., the powdered coal first robs the ore (iron oxide) of the oxygen, then turns into gas, leaving fatty pure iron granules which have a spongy texture. This spongy iron can be made, it will stand out to be fed to the steel furnaces.

Stedman's which the project with continuing doubts and hopes. If sponge iron can be made, it will stand out to be fed to the steel furnaces.

In the last 90 years the steel industry has spent millions in futile efforts to make sponge iron. Catch in the process is selection of an ore which can yield high-grade sponge. Plants in Sweden and Finland are now turning it out profitably.

Until this summer scrap iron and steel have always been abundant, so Stedman's have relied on them for 40 to 60 per cent of the charge in their furnaces. But now the U.S. needs scrap and needs it badly because there are not enough (1) open-hearth furnaces to produce steel at the slower rate required when higher percentages of pig iron are used, (2) blast furnaces to make pig from all the steel. The furnace handicap will be overcome if the sponge-iron process can be perfected, since sponge-iron plants can be built more quickly and cheaply than new blast furnaces, are cheaper to operate.

Now that it is on the list of items to be conserved, we can learn from the experience of the people in England. They found out, many months ago, that it is a waste of money to burn brown paper and place in waste—now they have for ten months as a result, they say, the war will go twice as far and have a better peace.

Secret Weapon

New Type Of Projectile To Be Produced In Britain

A new type of projectile soon will be put into production in Great Britain for use against the Axis forces. The British Information Service has announced.

It has been given as to whether it is a new type of shell, bomb or torpedo or as to how it will be used.

In large numbers in an undisclosed factory town in the Midlands.

It is said that while the British war workers are already being brought to the front to operate the machinery, when the first hundred of these weapons were "tried" for their new test they were found to be of great importance. They will be used in the future.

EATING HABITS

Canada For Good Eating In The Army Aldrich Of The Ministry of Health has issued the aid of the former member of Parliament and the former member of the House of Commons on the screen daily to tell soldiers why they should eat properly for their stomachs sake.

"The Orderly System of Messing" is the title of the tract which is issued by the Canadian army specifically for the Canadian army. It is a tract which is issued by the Canadian army specifically for the Canadian army.

The tract is the largest battle of the war being fought behind the belt, says Mr. Wald, talking from the screen with his old-time soldier's passion. "It is being fought in the stomachs of the soldiers."

He goes on to say that the army can't put a new engine in a tank but it can't get a man to eat properly if he refuses it by abuse; that the army wants to keep men in good condition for their own and the army's good. "In new rules, the film shows the worst habits of the soldier and the livestock farms from which the army gets its food, shows it does not want to be kept, inspected for quality, drawn from the depths by unit inspectors, drawn from the depths by unit inspectors, drawn from the depths by unit inspectors."

The cooking is portrayed on the screen as being a part of the training of kitchen help for cleanliness. The food is shown in the kitchen and the food is shown in the kitchen.

Wider training is another film produced for the Canadian army and it shows how men should use their ordinary equipment and how they can be comfortable and efficient in the cold weather.

Both films were produced by the National Film Board in Canadian army training centres under military supervision and the direction of military training.

The Victoria Cross

Royal Warrant For Making The Medal Held By Some Firm

Now 1856
When Queen Victoria instituted her new war decoration, the Victoria Cross, 86 years ago, she decreed that the medal should be struck from the metal of the guns captured by the British at the siege of Sebastopol. A director of the West End jewellers who fashion and inscribe the crosses recently stated, "That has been the case ever since until now, when the supply of the Sebastopol metal has run out. In future the Maltese crosses will be made from a gemstone supplied by the crown."

The Royal Warrant for making the medals remains with the firm which was the first to make them in 1856. The commission for the crosses have gone through only three times since the first was made. The first was made in the first year of the present reign, the second in the first year of the present reign.

Looked in the strong room at the jeweller's as a "joke" regarding the medals and the medals were made of the V.C. winners since the days of Midshipman Charles David Lucas. Mr. P. was awarded the Cross for throwing a live shell from the deck of his ship into the Baltic Sea in 1854—two years before the institution of the award. It contains nearly 1,500 medals. There were 103 awarded between 1856 and 1914, including 63 in the Crimean War, and 63 in the Great War. The 25 V.C.s of the war have been won by 17 army men, eight naval men and two civilians. A Canadian has yet to win the cross, for which women have been eligible since 1907. The Royal Albert Medal.

SOUNDS REASONABLE

The talk songs is believed to come from an old French word meaning "to put off one's clothes," meaning that in leaving one's cloak behind in the hands of the pursuers.

Ten Men Travel 300 Miles On Foot
In Africa Desert
In the early dawn of a day on the 10th of the month, a party of ten men, including a British and five South African soldiers, started on a journey to the East African coast and told the story of a 300 mile journey on foot from Tabora.

Thirty miles outside the harbor of East Africa they met a British night patrol returned from a raid. These hundred miles and 17 days before that meeting they began their journey.

The party was piloted the whole way from Tabora by Lind, W. Gibb, a South African international soccer player who now is an officer of a reconnaissance battalion. He was equipped with a compass and map which took them as far as Mera Marik. The rest of the way he was piloted on a general sense of direction in the desert.

The ten men travelled 200 miles on foot and more than 100 miles by lorry before they reached the Linye. They travelled with a pack of 100 men which they were using for food of attracting two good animals. He might they drove and walked. By night they were in the desert. They travelled the radiator of diesel. They travelled from forgotten border of Chad to Tabora.

The men left Tabora at 10 p.m. Just after the fort had fallen.

India's Quisling

Organization Of Indian, Ben-Being Voted By Government

Our revelation that Basbas Rao, Indian politician, who the Act was in close touch with his followers, has been followed by a speech given by the Government of India. A ban has been put on Basbas Rao's organization, the All-India Forward Bloc. Certain of its more radical members are under observation and will be put under constant if not direct surveillance of their conduct in furthering of their cause. Basbas Rao is a man who is well known in the Indian press.

GIRL LAYS FARMING

So many girls have expressed a desire to take up farming as a career that the government has decided to set up a girls' farming school. The school will be set up in the Indian press.

The men left Tabora at 10 p.m. Just after the fort had fallen.

DEVELOPED BY MILLER

Next air photo reconnaissance and glider troops carry with them a quick energy holder devised by a "Pusher" himself. About the size and shape of a chocolate bar, it has a weight of about 100 lbs. and contains a large number of British war aircraft.

There is no general to very 120 soldiers in the Indian army.

Export Control

Extended To All Prepared Foods

Miniature Radio

Small Pocket Receiver Is The Latest Development

In not so very long it is hoped you'll be able to take a radio into your pocket and put it out to work.

Engineers have developed a pocket receiver not much larger than the average pocketbook—six inches high and about two inches thick. The average pocketbook is six inches high and about two inches thick. The average pocketbook is six inches high and about two inches thick.

The miniature set has a crystal receiver which fits into the ear something like a hand-of-bearing set. The receiver is connected to the pocket set by a wire, which also contains the antenna for the set. It contains two smaller batteries and takes the size of a match.

Synthetic Rubber

Synthetic Rubber New Process For Making Rubber Out Of Grain

A new process for making synthetic rubber out of grain has been announced by H. F. Willis, vice-president of the Synthetic Rubber Company of Canada Limited, for its brand of compound, Osetonolite.

town men were to be found in the grain fields during the 1920 crop harvesting; nevertheless to those usually engaged in sedentary occupations, work in the grain fields is a tough proposition which the majority are uninitiated to cope with.

The proposal to defer the opening of high schools for one month and thus utilize the services of young lads between the ages of 15 and 17 years, most of whom are full of ambition and vigour, would seem to be the best and most reliable method of solving the problem, which, it has to be admitted, is one of great difficulty.

Local and District

Rev. Thos. Taylor was a visitor to Calgary last week.

LAC Mike Dwyer was home on leave from Patricia Bay, returning August 12th.

Fl-Sergt. T. C. Hoy is down East, receiving three months' operational training.

Mr. and Mrs. W. A. Low and son, Robert, were visitors in Delia on Saturday last.

Mr. and Mrs. Russell Moore, of Okotoks, were visiting at the home of Mr. and Mrs. Henry Moore this week.

The Misses Evelyn and Alice Rieger left on Friday for last week for Edmonton, where they will attend Normal School.

Mr. and Mrs. Frank Todd and infant son returned last week from a vacation spent at the home of Mr. Todd's parents, at Minnehah, Alta.

Mr. and Mrs. L. J. Olsen and daughter, Shirley, left by motor last week, to spend a few days' vacation at Banff and other places of interest in the vicinity.

It is reported that LAC Peel Hudson was transferred from Currie Barracks, Calgary, B.C., and is now stationed at Delia in that province.

Mrs. E. T. Ward, of the Drummer Hospital staff, now holidaying at the west coast, has received word that her husband, Captain F. T. Ward, of the 4th Army Tank Bn., Calgary Regt. Overseas, has been promoted to the rank of major.

It has been officially announced that Miss Mary Morrison, elder daughter of Mr. Alex. Morrison, and the late Alex. Morrison, has been selected for an officer's course in the Canadian Women's Army Corps, and will train at the Macdonald College, St. Anne's Bellevue, Que.

Another electrical storm broke over the district in the middle of last week. Very heavy rain fell in north and south districts, but only normal precipitation was experienced in the village.

The temperature has now turned finitely hot and grain is turning, some fields of barley needing but a few days for ripening.

Violent electrical storms swept the hours of 1:00 and 2:30 a.m. on Tuesday resulting in the destruction of power in Delia, and also telephone communication between Hanna and Delia.

Several suggestions have been offered, and it is understood that circulars have been received by farmers in the district with reference to the employment of Japanese in the harvest fields.

Another proposal is for stores in the villages to close either at certain hours or on certain days, and thus release help to go to the assistance of the hard-pressed grain producer who wished to utilize such service. With regard to this last proposal, many

farmers are in the district with reference to the employment of Japanese in the harvest fields.

PROTECT FLAX CROPS FROM GRASSHOPPERS

Grasshoppers are threatening to cause severe losses to flax crops in many sections of Southern Alberta. Contrary to general belief, the pest is present in dangerous numbers in many districts where flax is sown, and flax is extremely vulnerable to attack.

Due to prolonged cool weather and heavy precipitation this spring the grasshopper hatch was slow. Consequently the hoppers, though numerous, are still small and wingless and are not readily noticed in the dense foliage of fields and roadsides. These hoppers will be mowing, gulch of adults within a short time now, and will be in a position to move about readily.

Adult grasshoppers have a habit of slipping the seed heads of flax, causing the seed heads to fall to the ground. Some fields suffered as high as 90 per cent. loss in 1941. It takes only a moderate population to strip a flax field of seed in a few days before harvest.

Farmers would do well to obtain sufficient grasshopper bait to protect their crops, and particularly the flax crop, from the expected late summer influx of grasshoppers.

Local bait stations will be kept open for another week or two to permit all farmers to obtain supplies of poison to hold for such an emergency.

really will ripen, and most certainly not to thresh it until it is thoroughly dry. These farmers who combine and thresh will be sure to well advised to harvest their grain rather overripe than to run the risk of having green harvest or green seed needs to be in their threshing grain, for even a small percentage of green tines of either grain or seed will not heat in the grain. Much grain will certainly this year have to be stored on the farms, grain, therefore, which its harvest or goes out of condition will be a direct loss to the farmer.

It would appear that that any extra care used this year to ensure that grain is thoroughly ripe before cutting and thoroughly dry before harvesting, will tend to avoid losses to farmers, and will also help in making available more storage room in elevators, because tough grain necessarily takes up more storage space than does dry grain.

Decrease in Drivers' Licenses

Alberta's drop of approximately 20,000 the number of licensed car drivers compared with a year ago, has caused some speculation as to the factors responsible, according to officials of the Alberta Motor Association.

While it is realized that there is a drop of 5,000 new registrations as against a year ago, the sharp decrease in license renewals is the main factor.

Government officials claim, in explaining the falling off in drivers' licenses, that it is due to a combination of circumstances. The main one, it is claimed, is that numerous old licensees of young men in the armed forces have been responsible.

Still another factor is that as "dad" owns the car in many cases, and operates it according to his gasoline ration coupon, the younger members of the family do not take out licenses because they are not the main force of the car as in pre-war days. Many men just use their own cars for pleasure driving.

It is not available for pleasure driving to any great extent.

A preference will be shown by the driver's license owners who have been dropped because of cars being laid up on account of gasoline and tire restrictions.

The general situation, however, is being watched by the A.M.A.

Pioneer Grain Co. Reduces Both Street and Carlot Spread

Due to favorable conditions prevailing at the present time, it is the intention of our Company, if permitted to do so by the Canadian Wheat Board, that we will pay track price for "street" wheat; also reduce the elevator handling charges on wheat by one (1c) cent a bushel.

This reduction in elevator charges should save the farmers of western Canada about \$6,000,000.

AN OLD CANADIAN CUSTOM . . .

When our pioneer grandparents had a big job to do they called in their neighbours. A barn raising brought help from miles around. Skilled barn framers took charge; sides were chosen and competition between teams lent interest to the work. This old Canadian custom was revived when Canada's National War Finance Committee was

formed and went into operation. Under the leadership of the National and Provincial Committees—men experienced in the organization and conduct of financial operations—Local Committees were formed in all communities. Co-operation and competition characterized the work. The biggest "raising" in Canada's history got away to a magnificent start.

WE'VE GOT A BIG JOB TO DO NOW

The War goes on. The National War Finance Committee carries on. Some will serve on the committees organized to promote continued sales of Bonds, War Savings Certificates and Stamps. All of us must continue to buy these securities. We must save every dollar, every cent we can—and lend our money to Canada. We must provide the money required to carry on the war—the money required to win the war.

Our fighters must have more ships and tanks and guns and planes. They must have better ships and tanks and guns and planes than the enemy has. We must all work, and save and lend. The safest investments we can find for our savings are Bonds, War Savings Certificates and Stamps—and they will provide money for us to buy things that we will want when the war is ended.
